

Meet the Species — Cinematic Video Overlay & Interaction Design Guide

This document explains how to transform the “Meet the Species” section into a cinematic, interactive educational experience.

The goal is to make the Hawaiian Coot introduction feel immersive, emotional, scientific, and visually engaging while maintaining the elegant endangered-species theme of the website.

Overall Experience Goal

The video section should introduce visitors emotionally before they explore scientific information and conservation data.

The section should:

- Create emotional connection
- Inspire curiosity
- Feel cinematic and immersive
- Introduce ecological importance
- Encourage interaction and scrolling

Desired tone:

- Elegant
 - Calm
 - Scientific
 - Hopeful
 - Documentary-inspired
-

Cinematic Opening Title

Recommended title overlay:

HAWAIIAN COOT

Fulica alai

Animation ideas:

- Slow fade-in
- Soft upward motion
- Slight gold glow
- Fade out after 3–4 seconds

Typography:

- Elegant serif font
 - Italic scientific name
 - Warm gold or ivory text
-

Scientific Quick Facts Overlay

Quick scientific facts can appear subtly in the corner of the video.

Suggested facts:

- Endemic to Hawaii
- IUCN Status: Vulnerable
- Wetland Waterbird
- Approximately 3,200 remain

Design recommendations:

- Semi-transparent card
 - Minimal icons
 - Gold and teal accents
 - Smooth fade transitions
-

Rotating ‘Did You Know?’ Facts

Educational facts can rotate every few seconds.

Examples:

- Hawaiian Coots build floating nests.
- Their lobed feet help them swim efficiently.
- They are found only in Hawai*■*i.
- Wetlands support biodiversity.
- Conservation efforts helped save the species.

Timing:

- Rotate every 6–8 seconds
 - Use smooth transitions
 - Keep text concise
-

Documentary-Style Captions

Instead of normal subtitles, use cinematic narration captions.

Example captions:

“A survivor of Hawai*■*i’s disappearing wetlands...”

“A species dependent on fragile ecosystems...”

“Conservation may determine its future...”

Design:

- Elegant serif text
 - Large spacing
 - Subtle fade animations
-

Interactive Hover Hotspots

Hotspots can appear when users hover or pause the video.

Suggested hotspots:

- Lobed feet
- White frontal shield
- Waterproof feathers
- Nesting habitat
- Wetland vegetation

Interactions:

- Click opens mini educational panel
 - Smooth zoom effect
 - Subtle glowing hotspot
-

Environmental Atmosphere Effects

Subtle environmental animations improve immersion.

Recommended effects:

- Water ripple overlays
- Floating light particles
- Gentle drifting mist
- Soft sunlight glow
- Slight fog movement

Important:

Animations must remain subtle and cinematic.

Population Awareness Indicator

A small statistic can remain visible during the video.

Example:

~3,200 Remaining

Animation:

- Soft pulse
- Subtle glow
- Gentle heartbeat effect

Purpose:

Maintains awareness of conservation urgency.

Scroll Guidance Prompts

After several seconds, prompts can guide users.

Suggested prompts:

- Scroll to Explore
- Discover Their Adaptations
- Learn About Wetland Conservation

Animation:

- Floating arrow
 - Slow fade
 - Minimal movement
-

Visual Style Recommendations

Recommended style:

- Deep black overlays
- Gold typography
- Crimson warning accents
- Dark green ecosystem colors
- Teal highlights

Avoid:

- Bright neon colors
 - Excessive UI clutter
 - Flashy motion
 - Cartoon-style effects
-

Advanced Interactive Features

Future advanced features may include:

Interactive Timeline:

- Population decline visualization
- Conservation milestones
- Habitat restoration progress

Environmental Simulations:

- Drought mode
- Hurricane impact mode
- Wetland recovery mode

Adaptive Audio:

- Wetland ambience
 - Water sounds
 - Bird calls
 - Wind effects
-

Final Creative Direction

The “Meet the Species” section should feel like the opening sequence of a premium nature documentary.

Visitors should feel:

- Emotional connection

- Curiosity
- Respect for wetlands
- Concern for conservation
- Hope through restoration

Core message:

The Hawaiian Coot is both vulnerable and resilient, and its future depends on conservation.
